

Software Requirements Specification Document- SRS

1. Project Information

- Team Name: Fantastic Four
- Team Members: Hamidat Oloko, Asif Khan, Nesna Prasai, Genesis Enemuoh
- Team Lead: Hamidat Oloko
- Project Title: Appointment scheduling system

2. Project Overview

This system is an appointment scheduling system that allows users to easily schedule their doctors' appointments online. This system reduces missed appointments by ensuring that users get reminders before their upcoming appointments, allows users to cancel their appointments with ease, and helps them find appropriate time slots that fit their schedule. The problem that this is trying to fix is to reduce the amount of no shows and help people carefully plan their time. The people that will use this system are people that struggle with using technology and have remarkably busy lives.

3. User Stories

List the key features using user stories:

Format:

As a [user type], I want [goal], so that [reason].

- User Story 1: As a patient, I want to book my doctor's appointments online instead of calling, so that booking is faster and more convenient.
- User Story 2: As a patient, I want to receive appointment reminders so that I do not miss any appointments.
- User Story 3: As a patient, I want to cancel or reschedule appointments so that I can manage changes according to my schedule.
- User Story 4: Manage doctor availability as an admin so that appointment slots remain up to date.
- User Story 5: As a doctor, I want to view my appointment schedule so that I can prepare for upcoming patients.

4. Functional Requirements

List what the system must do (system features and behavior).

- FR1: The system should allow patients to create an account and log in so they can access and manage their appointments.
- FR2: The system shall allow patients to view available appointment slots and schedule appointments online.
- FR3: The system shall send appointment reminders to patients before their scheduled appointments.
- FR4: Patients can cancel or reschedule appointments through the system.

- FR5: This system should provide doctors or administrators with the ability to view and manage appointment schedules.

NFR1: The system shall provide an intuitive, user-friendly interface that allows users to navigate and complete tasks with minimal effort.

NFR2: The system shall securely store and protect all user information and appointment data using appropriate authentication and data protection practices.

NFR3: The system shall maintain high availability by limiting system downtime to a maximum of 6 hours per month.

Example system performance, usability, security, and timing

- NFR1: The system will provide a user-friendly intuitive which can be easily navigated by a user.
- NFR2: The system will keep all user details and appointment information securely.
- NFR3: The system shall have a minimum downtime of 6 hours per month.

6. User Roles

Identify who will use the system.

- Role 1: Patient (Client)
- Role 2: Doctor (Service provider)
- Role 3 (if applicable): Administrator

7. Scope (Very Important)

Clearly define:

What is included in the project:

- Patients can create accounts and log in
- Patients can view available appointment slots and book appointments online
- Patients can reschedule their appointments
- Doctors can view their appointment schedule
- Appointment history can be viewed by both patients and doctors
- Automated appointment reminders sent to patients and doctors before their appointments

What is NOT included (out of scope):

- Mobile App
- Payment or billing features
- Video or telehealth appointments
- Multi language support

- Integration with hospital systems

8. Priority of Features (Agile Addition)

Label each user story or feature:

- Must Have: Reschedule appointments, Schedule appointments, View appointments, Login and verification.
- Should Have: Appointment reminders, Appointment History.
- Could Have: Dark mode, Feedback/rating system.

9. Diagrams

You may include:

- Use case diagram
- Simple workflow diagram
- System overview sketch
